Hi All,

I am a consumer of electricity belonging to the Village Akthiyarpur, Block Banmankhi, Dist Purnia, I want to inform you that there is Low Voltage issue of electricity in our Village, as per the electricity standard in India we should receive 220 volt of electricity, but we are receiving between 50 to 90 Volt. We have been complaining it since a year but there is no result. All my complaints were closed without providing the resolution. low voltage does not permit our fans and light to operate. It puts us into great difficulties. The children who are going to face their examination the next week are the first victims.

I, therefore, request you to kindly take early steps to check this problem. We shall be grateful to you for such help.

Thanks & Regards

Aameer Ahmad
